Conclusions

MODIS Cloud Phase Discrimination (Introduction) :

Why is it important to continue improving the cloud phase discrimination ?

Imaginary part of the refractive index for liquid and ice particles

Spherical vs. non spherical particles

- cloud and climate modelling
- cloud remote sensing.

Why is it important for cloud remote sensing ?

⇐ (fig) different optical properties between ice and liquid particles

⇒ Strong impact on the MOD06 product.

MODIS-PARASOL

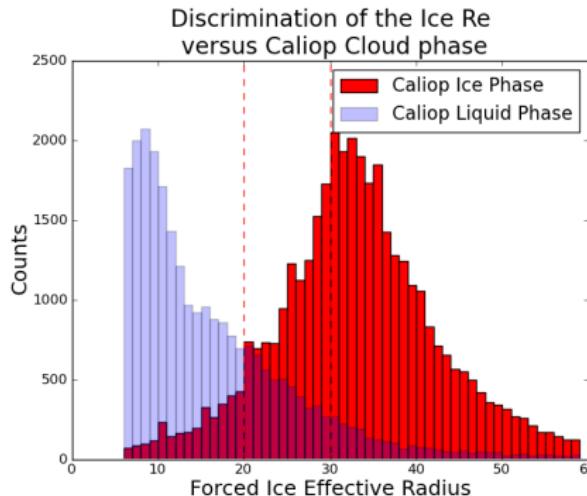

Conclusions

How cloud phase pixel classification works in C6 :

New Cloud Phase Discrimination Algorithm (No longer use cloud mask tests)

MODIS C6 cloud phase algorithm is based on

- C6 1km Cloud Top Temperature,
- C6 1km Cloud Phase Infrared [Baum et al. (2012)] ,
- a $1.38 \mu\text{m}$ reflectance test,
- and 3 Cloud Effective Radius tests.

- Re retrieval at $1.6 \mu\text{m}$
- Re retrieval at $2.1 \mu\text{m}$
- Re retrieval at $3.7 \mu\text{m}$
- .
- .
- .

⇐ (fig) C5 SWIR reflectance ratio tests are replaced by Re tests (using the new Ice LUT model). (see also : Bob Holz et al. talk)

Over Snow/Ice Desert

MODIS-PARASOL

Conclusions

Cloudy Pixel Populations Differences (C6 vs C5) :

Is the cloud phase reported for the same pixel population as C5 ?

- C5 : cloud phase discrimination are reported only when CSR = 0
- C6 : cloud phase discrimination are reported when CSR = 0,1,3
- CSR (Clear Sky Restoral) algorithm has been improved for C6 (see Kerry Meyer's presentation on Thursday)

⇒ What are the differences between MODIS C5 and C6 at a granule level ?

MODIS-PARASOL

Conclusions

Comparisons Caliop-Modis : Data Screening (1/2)

What data screening has been used for these comparisons ?

- Calipso/Caliop 1km & 5km product version 3 and Aqua/MODIS
- Caliop and Modis data from January and July 2008
- Caliop Version 3 of Cloud thermodynamic Phase :
 - Liquid Cloud
 - Ice Cloud (ROI Randomly Oriented Ice)

- Caliop : only one cloud layer found
- Surface flags (Modis)
- (Opt.) Opacity flags (Caliop)
- (Opt.) with/without snow/ice surface flags (Modis)

⇒ about 45 different data screenings

MODIS-PARASOL

Conclusions

Comparisons Caliop-Modis : Data Screening (2/2)

Which methodology has been used to compare Modis and Caliop ?

- ⇒ Development of contingency tables (3×2)
- ⇒ Definition of skill scores (for the analysis of association)

Two skill scores :

- OverAll Score $[0, 1]$

$$score = \frac{a_{31} + a_{22}}{\sum_{i=1}^3 \sum_{j=1}^2 a_{i,j}}$$

- KSS Score $[-1, 1]$
(Hanssen-Kuiper Skill Score)

$$score = \frac{(a_{21} * a_{32} - a_{22} * a_{31})}{(a_{21} + a_{31})(a_{22} + a_{32})}$$

MODIS-PARASOL

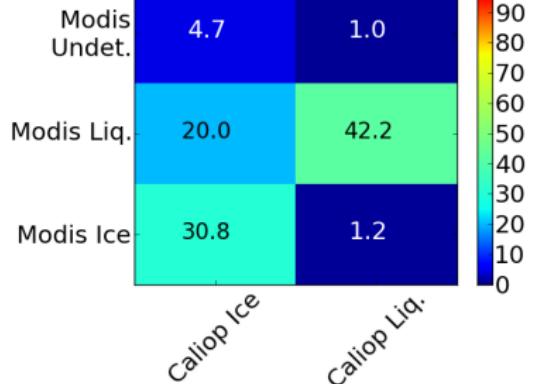

Conclusions

Conclusions :

MODIS C6 Cloud Thermodynamic Phase :

- New Cloud Phase Discrimination Algorithm Logic
(No longer use cloud mask tests)
Based on the new C6 Ice LUT model.
- Comparisons MODIS C6 vs C5
 - ⇒ Better cloud phase discrimination for Broken clouds.
 - ⇒ Better cloud phase discrimination for Ice cloud Edges.
- Comparisons MODIS C6 vs CALIOP
 - ⇒ Globally a better agreement between MODIS and CALIOP
 - ⇒ Substantial improvement over Desert/ Snow Ice Surfaces.
- Comparisons MODIS C6 vs POLDER
